

## Helpful Hints

### Ceramica TF

- Ceramica TF is WET USE ONLY!
- Avoid Sharp Corners of the stone to prevent damage to the disc.
- Very little pressure is needed when using Alpha Ceramica TF. The high quality diamond grits will do the job for you.
- 60 grits of Ceramica Vitrified or Metal Bond is recommended for use after a grinding cup wheel, profiler or router bit applications.
- For tight areas such as corners, we recommend using an undersized backer pad to give the Ceramica TF more flexibility.
